Ceramic or Metal

The original HPL lamp celebrates its comeback.

In the early 90's the HPL lamp was developed in close cooperation of ETC™ and USHIO. A decade later the ceramic base was the response for applications in humid surrounding where arcing between the socket and the metal base occurred. As some of our customers prefer the traditional design, we now re-launch the Metal base type next to our Ceramic base type.

Both types are identical in life-time and optical performances. Certainly they both feature USHIO's ultra compact filament design giving maximum intensity with an even circular light distribution (see graphics below).

And now the choice is yours

Lamp Code	Voltage V	Wattage W	Colour Temp. K	Lifetime hrs. ave.	Item-code
Metal
